

Wild@Ace 2004

Workshop on Industry and Labor Dynamics.
The Agent-based Computational Economics Approach

Call for Participation

Call for Paper

Wild@Ace 2004, Workshop on Industry and Labor Dynamics – the Agent-Based Computational Economics Approach, will be held in December 3-4, 2004 in Turin, Italy at LABORatorio Riccardo Revelli.

This is the second Wild@Ace event, jointly organized by LABORatorio Revelli, the University of Turin – Department of Economics, and the Social Interaction Economics and Computing group (SIEC). The theme of the conference is the conjunction between a broad area of interest, namely Labor Economics and Industrial Organization, and the agent-based simulation approach. Wild@Ace 2003 was the first event ever with this specific focus, and was attended by a great number of internationally recognised scholars.

The topics of the Wild@Ace 2004 conference are the same, namely:

- Firm demography
- Individual behavior in the labor market
- Innovation and entrepreneurship
- Wage inequality and poverty
- Ageing population, migration and demographic changes
- Industrial districts, local interaction and economic performance

An important issue in agent-based modelling is the integration of artificial and real data, so contributions are particularly welcomed on the following topics:

- Simulation – based estimation
- Validation and Calibration
- Agent-Based Microsimulation
- Micro-econometric foundations of agents' behavior

Deadlines:

- 1 page abstract and title: June 1, 2004. Notice of acceptance will be sent by July 1, 2004.
- full paper: October 1, 2004.

Abstract should be sent by email to wild@labor-torino.it
