There is a bug in GNU a2ps 4.13 to the following effect:

Under locale where "," is used instead of "." for decimal notation (e.g. LC_NUMERIC="da_DK") the postscript created is bogus (containing "," instead of "." in arguments), causing the file to be nonviewable (gv) as well as nonprintable due to .

Example is attached.

I believe this might be a problem for other GNU programs but have not done any detailed research.

Best,
Sune Rastad Bahn
