```

Really? I left it long ago, I wish I would have some use of Libreoffice, but don't.

```
(setq ps-bottom-margin 40)  
(setq ps-header-offset 20)  
(setq ps-lpr-command "ps-print.sh")  
(setq ps-print-footer t)  
(setq ps-top-margin 100)  
(setq lpr-command "paps_print.sh")
```

ps-print.sh:

```
#!/bin/bash  
tmpdir=/home/data1/protected/tmp/muttprint/  
mkdir -p $tmpdir  
cd $tmpdir  
file=$tmpdir/$(date +%F-%T-%A'  
#highlight --syntax=lisp --page-color -O pango | paps --markup --font="Monospace 11" > $file.ps  
cat > $file.ps  
#gv $file.ps  
# paps --font="DejaVu Sans Mono 11" > $file.ps  
ps2pdf14 $file.ps  
exec zathura $file.pdf 2> /dev/null &
```

paps\_print.sh:

```
#!/bin/bash  
tmpdir=/home/data1/protected/tmp/muttprint/  
mkdir -p $tmpdir  
cd $tmpdir  
file=$tmpdir/$(date +%F-%T-%A'  
#highlight --syntax=lisp --page-color -O pango | paps --markup --font="Monospace 11" > $file.ps  
paps > $file.ps  
#gv $file.ps  
# paps --font="DejaVu Sans Mono 11" > $file.ps  
ps2pdf14 $file.ps  
zathura $file.pdf 2> /dev/null &
```
