

## Basic config

Add org load paths to config and set some general stuff I prefer:

```
(add-to-list 'load-path "~/elisp/org.git/lisp/")
(add-to-list 'load-path "~/elisp/org.git/contrib/lisp")
(setq-default fill-column 90)
(add-hook 'text-mode-hook 'turn-on-auto-fill)

(org-babel-do-load-languages
 'org-babel-load-languages
 '((shell . t)
  (emacs-lisp . t)))

(require 'ox-latex)
```

## Google mobileorg

- found [mobileorg wiki](#)
- googled "orgmode mobileorg" and found [org manual page](#)

Noted that [documentation](#) says:

Initial Setup: Set up the location of your org-files by configuring and running 'org-mobile-push' in emacs.

Looks like we set up emacs side first.

## Setup emacs side

Click [staging area](#) section and see that I need to tell it what directory to use. Also says I should connect mobile-org to Dropbox and that directory will be created automatically, so I'll just do that:

```
(setq org-mobile-directory "~/Dropbox/MobileOrg")
```

To get that directory, sounds like we:

- install mobile-org on phone
- connect to dropbox
- install dropbox on laptop
- sync and find folder it created (same as listed in manual/below)
- add this to config

**Note:** wouldn't you know that Dropbox is down for maintenance, so I had to skip connecting mobileorg to dropbox on phone/finding MobileOrg file on computer. I just manually created ~/Dropbox/MobileOrg it so it existed in order to continue with the test.

```
(setq org-mobile-directory "~/Dropbox/MobileOrg")
```

Go back and click [pushing](#). Looks like I need to tell it which files to push. I'll create a notes.org file as well as adding this instructions file.

```
(setq org-mobile-files '("~/Desktop/mobile-org-setup/notes.org"
  "~/Desktop/mobile-org-setup/instructions.org"))
```

Note that paths are relative to org-directory. For now, ignoring since I gave full paths above, but looks like one could set org-directory to, e.g., ~/Desktop/mobile-org-setup/ and then just list notes.org and instructions.org.

Go back and click [pulling](#). Looks like I'm not ready for this yet since I haven't done anything from Dropbox yet, but we need to tell Org where changes from mobile will land:

```
(setq org-mobile-inbox-for-pull "~/Desktop/mobile-org-setup/changes.org")
```

## Try it out

Well, I happen to know that the command is org-mobile-push, but I find it odd that the page doesn't actually tell you what to do (i.e. run this command) after doing the stuff above. In any case, we run the command:

```
/home/jwhendy/Dropbox/MobileOrg
  agendas.org
  checksums.dat
  index.org
```

instructions.org  
mobileorg.org  
notes.org

0 directories, 6 files

Looks good to me.

To reproduce,

- put this file somewhere
- adjust paths as needed
- run `M-x org-babel-tangle` on this file
- run `emacs -Q` from the directory this file lives in
- run `M-x load-file RET ./min-config`
